Introduction

تمهيد

من الصعوبة التوصل إلى مجموعة وحيدة وثابتة من الرموز لتغطية المجال الشاسع من البيانات (data) و النماذج (models) والخوارزميات (algorithms) التي نناقشها في هذا الكتيب. علاوة على ذلك، العلامات الرياضية المتفق عليها تختلف بين علم تعلم الآلة (machine learning) و علم الإحصاءات (statistics)، و بين الكتب والأوراق العلمية المختلفة. مع ذلك، فقد حاولنا أن تكون الرموز المستعملة متسقة قدر الإمكان. فيما يلي نلخص معظم الرموز المستخدمة، هذا لا ينفي أن بعض المقاطع الفردية في الكتيب قد تعرض رموزا جديدة. إعلم أيضا أن بعض الرموز قد يكون لها معان مختلفة تبعا للسياق، رغم أننا سنحرص على تجنب ذلك قدر الإمكان.

Linear algebra notation

رموز علم الجبر الخطي

خلال هذا الكتاب، سنستخدم أحرف **boldface** الصغيرة للدلالة على الناقلات (vectors) مثل x وأحرف **boldface** العلوية للدلالة على المصفوفات مثل X . نشير إلى إدخالات مصفوفة (matrix entries) بأحرف كبيرة غير جريئة، مثل X_{ij} .

We use **boldface** lower-case to denote vectors, such as x , and **boldface** upper-case to denote matrices, such as X . We denote entries in a matrix by non-**bold** upper case letters, such as X_{ij} .

Vectors are assumed to be column vectors, unless noted otherwise. We use (x_1, \dots, x_D) to denote a column vector created by stacking D scalars. If we write $X = (x_1, \dots, x_n)$, where the left hand side is a matrix, we mean to stack the x_i along the columns, creating a matrix.

Probability notation

We denote random and fixed scalars by lower case, random and fixed vectors by **bold** lower case, and random and fixed matrices by **bold** upper case. Machine learning/statistics notation

In general, we use upper case letters to denote constants, such as C, K, M, N, T , etc. We use lower case letters as dummy indexes of the appropriate range, such as $c = 1 : C$ to index classes, $i = 1 : M$ to index data cases, $j = 1 : N$ to index input features, $k = 1 : K$ to index states or clusters, $t = 1 : T$ to index time, etc.

We use x to represent an observed data vector. In a supervised problem, we use y or \mathbf{y} to represent the desired output label. We use \mathbf{z} to represent a hidden variable. Sometimes we also use q to represent a hidden discrete variable.
